SEA ME - YEAR 10 MARINE ECOLOGY TRIP TO SWEDEN

On our trip to Sweden, we experienced many things. The six of us who were chosen as members of the team analysed various sea creatures such as jellyfish, periwinkles and crabs. We worked with marine scientists on experiments, and even made new friends from schools such as the International School of Estonia. All of this took place on the beautiful coast of Tjärnö, a small place on the West of Sweden. For all of us it was a great, enjoyable experience; an experience we won't be forgetting anytime soon!

Portia, Laure, Jordanne, Maxime, Stefan, Michelle

This initiative by Elisabet Brock (an ex-ISL Board Chair) has been a fantastic opportunity for our students and those from the other participating schools. We are hoping that it will continue in years to come. There was a full page covering this event in the Bohusläningen (local newspaper) and we were even interviewed live for local radio. The six students on this trip were excellent ambassadors for ISL and I want to thank them for their immaculate behaviour and enthusiasm throughout.

Helen Ashton
